

**Company Profile:**

Company:	<b>SmartSoftware</b>
URL:	<a href="http://www.smartsoftware.ru">http://www.smartsoftware.ru</a>
Contact E-mail:	<a href="mailto:director@smartsoftware.ru">director@smartsoftware.ru</a>
Headquarters:	Moscow, Russia
Number of Employees:	11
Year of Foundation:	2003
Contact Phone:	+7 495 3639868
Fax:	+7 495 3639868
Mailing Address:	Sharikopodshipnikovskaja str., building 22, office 50, Moscow, Russia
Visiting Address:	Sharikopodshipnikovskaja str., building 22, office 50, Moscow, Russia

**Software Development Center(s):**

Moscow, Russia

**Software Development Services & Skills:**

Areas of Expertise:	<ul style="list-style-type: none"><li>• Document Management Applications;</li><li>• Software Development;</li><li>• E-Business;</li><li>• Software Maintenance and Support</li></ul>
Industry Domains:	<ul style="list-style-type: none"><li>• Business of services—restaurants, hotels,</li><li>Industry of entertainment &amp; sport</li><li>• Retail / Distribution</li></ul>
Programming Languages:	<ul style="list-style-type: none"><li>• Java;</li><li>• C++, C</li></ul>
OS/Platforms:	<ul style="list-style-type: none"><li>• LINUX;</li><li>• Microsoft Windows</li></ul>
Databases:	<ul style="list-style-type: none"><li>• PostgreSQL;</li><li>• Oracle</li></ul>
Technologies:	<ul style="list-style-type: none"><li>• Java, J2EE, J2SE;</li><li>• SOAP;</li><li>• Web Services;</li><li>• XML/XSL</li></ul>
Application and Web Servers:	<ul style="list-style-type: none"><li>• Jboss;</li><li>• TomCat</li></ul>

## Additional Info About SmartSoftware:

---

Any industry requires specific decisions.

**SmartSoftware Company** possesses serious experience in developing real-time accounting programs for hospitality business. Everyone with the experience in the service industry knows that it is very hard for service staff to be adequate emotionally to the festive atmosphere of not their event. Friendly team atmosphere, well-arranged management and customer service technology, artistically made order in face of amazed public, all this is a philosophical moth wing stroke that creates apprehension, mood and forms a recipe of successful business. High level of service at all working places of all employees directly depends on the quality of automated records management system: simple operation of SMART-system by the user is supported by the MICAH principle – **Make It Complicated And Hide It** – the user cannot see the complexity of its implementation. In programs used by executive staff sensor technologies are applied, and they look like computer games with their colorful design, clear to everybody game interface and crisp logic hidden in the program code.

Generally young people work in service industry and their attitude to their job and to the company is a key factor of success in this business, while we live in "relations marketing" epoch.

The hospitality business management systems **SmartRestaurant, SmartSport, SmartHotel** are composed of various program modules with unified database using modern hard- and software components representing the integrated technical solution.

The slogan for the strategy of development is: "No difference between the program and real management!" Nothing has to draw the staff away from the main goal: high quality services should be granted to the Guest. It is widely known, that the shortcoming of operational systems and software are almost the main reasons of outstanding losses caused by computer abusers to the world economy. The main part of hackers' attacks is possible because of vulnerability bugs in present operational systems and software. More and more maleficent codes appear in the Internet, that can be used for penetration into computers with the aim to carry out some programmed actions and its further propagation. The SmartSoftware programmers successfully prevent this Evil with their innovative solutions in software and database protection.

Complementary to standard safety measures given by operational system Linux the **SmartSoftware** programmers developed and patented a technical solution that offers a unique level of safety for automated management system user identification and authentication, that makes it invulnerable as for a professional hacker, so for unreliable employee.

Therefore, the property of business owner and collective labor of workers are protected. Security infraction and uncertainty of data are of critical importance. These factors blunt the effectiveness of automated system use or completely sterilize it.

**SmartSoftware** program products are crucially new for services industry; they prevent the negative intrusion of human factor: fraud of unreliable staff, competitive intelligence, hackers' attacks and so on. Even changes in data cannot be done by the employee if they are out of his authority within the application – in case you use **Smart-programs!**

**Smart-systems** apply the most modern trade equipment from the leading international suppliers. Biometrical data devices are used for customers and system user identification. Biometrical identification is an evident benefit and competitive advantage for SmartSoftware Company but not an end in itself.

The security of database, culture and high level of service at SmartSoftware customers' businesses are the result of innovational solution.

**Don't be afraid of Linux! We will take care of you!**
